

JUN 26 2006

60,469-030; OT-4798

**Amendments to the Specification:**

Please replace paragraph 7, on page 2, with the following paragraph:

7. A system designed according to this invention preferably includes a design module that provides elevator system design information to an individual customer or user based upon one of a plurality of types of information provided by the individual. A communications module facilitates communication between the individual (typically at a ~~remove-remote~~ location) and the design module.
